## Intelligent Turning Point Indicator

• Add Intelligent Turning Point indicator - Right click on chart and select Indicators...

• Select ITurning\_Points\_Indicator and click Apply then click OK to continue.

## **Discretionary Manual Trading System**

#### Simple 3 Point system

- Turning Point Renko Bar Average / Mean Renko Bars TPRenko
- **Turning Point Trend Indicator** Shows potential Turning Points
- **Turning Point Trend Indicator** Trend Following system that gets in late and out late but holds a position through long trades without getting out early

A trade is made when there are two (2) factors present in a particular order.

- 1. There is a turning point signal which predicts a change in trend.
- 2. There is a change in trend direction from short (red) to long (black).

# Signal 1 – Change in trend turning point.

#### Signal 2 – Change in trend line signal

Unmarked with a visual change from red

(short) to black (long).

Marked with an arrow and direction of change to black up arrow (long).

#### Ways to trade

There a couple ways to trade this indicator.

**Aggressive** – enter first contract after the creation of the trend change up bar. Enter the second contract after the true second signal with the change in trend from red (short) to black (red).

**Conservative** – wait for first Turning Point Bar changing direction and then enter when the trend line signal turns from red to black (long).

Sometimes – there is a major turning point and no Turning Point signal. Oh well – don't take it. Wait for the signal.

## **Examples of Trades**
